

Stephen Hegyes

Week 8 Research Assignment

Research different constructs that are available in MySQL when retrieving data. What types of constructs can be put into the WHERE clause?

You can put SELECT and FROM into the WHERE clause as well as UPDATE and DELETE

What else have you learned about MySQL from your research?

I learned that you can also put operators in WHERE clauses through my research (=, <, >, >= etc.)

I also learned a whole lot this week and really enjoyed Draw.io. being able to visually the relationships was super helpful.
